

An Introduction to Medicinal Chemistry

Sixth Edition

Graham Patrick

Table of Contents

1:Drugs and drug targets - an overview

Part A Drug targets - structure and function

2:Protein structure and function

3:Enzymes: structure and function

4:Receptors: structure and function

5:Receptors and signal transduction

6:Nucleic acids: structure and function

Part B Pharmacodynamics and pharmacokinetics

7:Enzymes as drug targets

8:Receptors as drug targets

9:Nucleic acids as drug targets

10:Miscellaneous drug targets

11:Pharmacokinetics and related topics

Case study 1: Statins

Part C Drug discovery, design, and development

12:Drug discovery: finding a lead

13:Drug design: optimizing target interactions

14:Drug design: optimizing access to the target

15:Getting the drug to market

Case study 2: The design of ACE inhibitors

Case study 3: Artemisinin and related antimalarial drugs

Case study 4: The design of oxamniquine

Part D Tools of the trade

16:Combinatorial synthesis

17:Computers in medicinal chemistry

18:Quantitative structure-activity relationships (QSAR)

Case study 5: *De novo* design of a thymidylate synthase inhibitor

Part E Selected topics in medicinal chemistry

19:Antibacterial agents

20:Antiviral agents

21:Anticancer agents

22:Cholinergics, anticholinergics, and anticholinesterases

23:Drugs acting on the adrenergic nervous system

24:Opioid analgesics

25:Antiulcer agents

26:Cardiovascular drugs

Case study 6: Steroidal anti-inflammatory agents

Case Study 7: Design of a novel antidepressant

Case Study 8: The design and development of aliskiren

Case Study 9: Factor Xa inhibitors

Case Study 10: Reversible inhibitors of HCV NS3-4A protease

Appendices
